The **DynaDolly XL** unit is designed for the transport of 20' to 53' shipping containers that are in the standard width of 96". The neck and dolly portion of the unit are all designed and rated at a 50,000 lb load limit giving a combined total of 100,000 lbs of structural integrity.

It is an extremely cost-effective solution that retails under the cost of a single 15 ton hoist and wholesales for less than the cost of any comparable device on the market today. Retail sales levels provide retailers nearly 50% in margin, while providing a retail price point that maintains a level that is acceptable to the consumer.
